

## RENTAL FRAMES

for 1-chip and 3-chip DLP projectors

The new frames ET-RFD60 and ET-RFD40 for 3-chip and 1-chip DLP projectors have a very similar look to the previous series but incorporate some major advantages, including:

- Convertible design that makes it easy to remove the upper part of the frame without additional tools when using ultra-short throw lenses
- Full stacking compatibility with previous frames with almost identical outer dimensions
- Built-in galvanic insulation from the projector housing to the trussing - no need for additional plastic washers to avoid electrical problems
- Makes mounting the projector in the frame simpler and enables you to adjust the projector more precisely when inside the frame
- DGUV V17 verified
